- Management and maintenance of equipment, including printers, scanners, and workstations.
- Administration of applications such as WordPress, Google Sheets/Excel, and AnyDesk for optimizing internal processes.
- Implementation of best practices in information security, access control, and vulnerability monitoring.

PROJECTS

Final Year Project - U-Phood Academic project developed in Android Studio, using Java for the mobile application, C for embedded programming on Arduino, and Google Firebase for real-time data storage and synchronization. The solution consisted of a smart tray that monitored the weight of products via sensors and allowed the user to remotely manage the inventory. The project applied IoT concepts, mobile development, and cloud computing, demonstrating efficient integration between hardware and software.
